

Report: Sample QC Kallisto Quantification

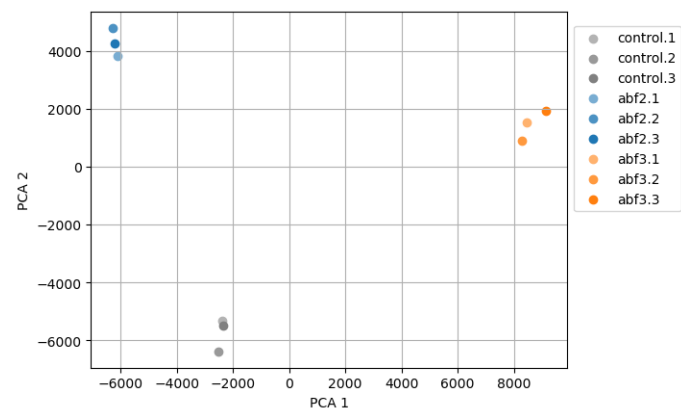

Contents

1	Summary	1
2	PCA	2
3	Expression-Profile-Distributions	2
4	Gene-Expression-Correlation	3

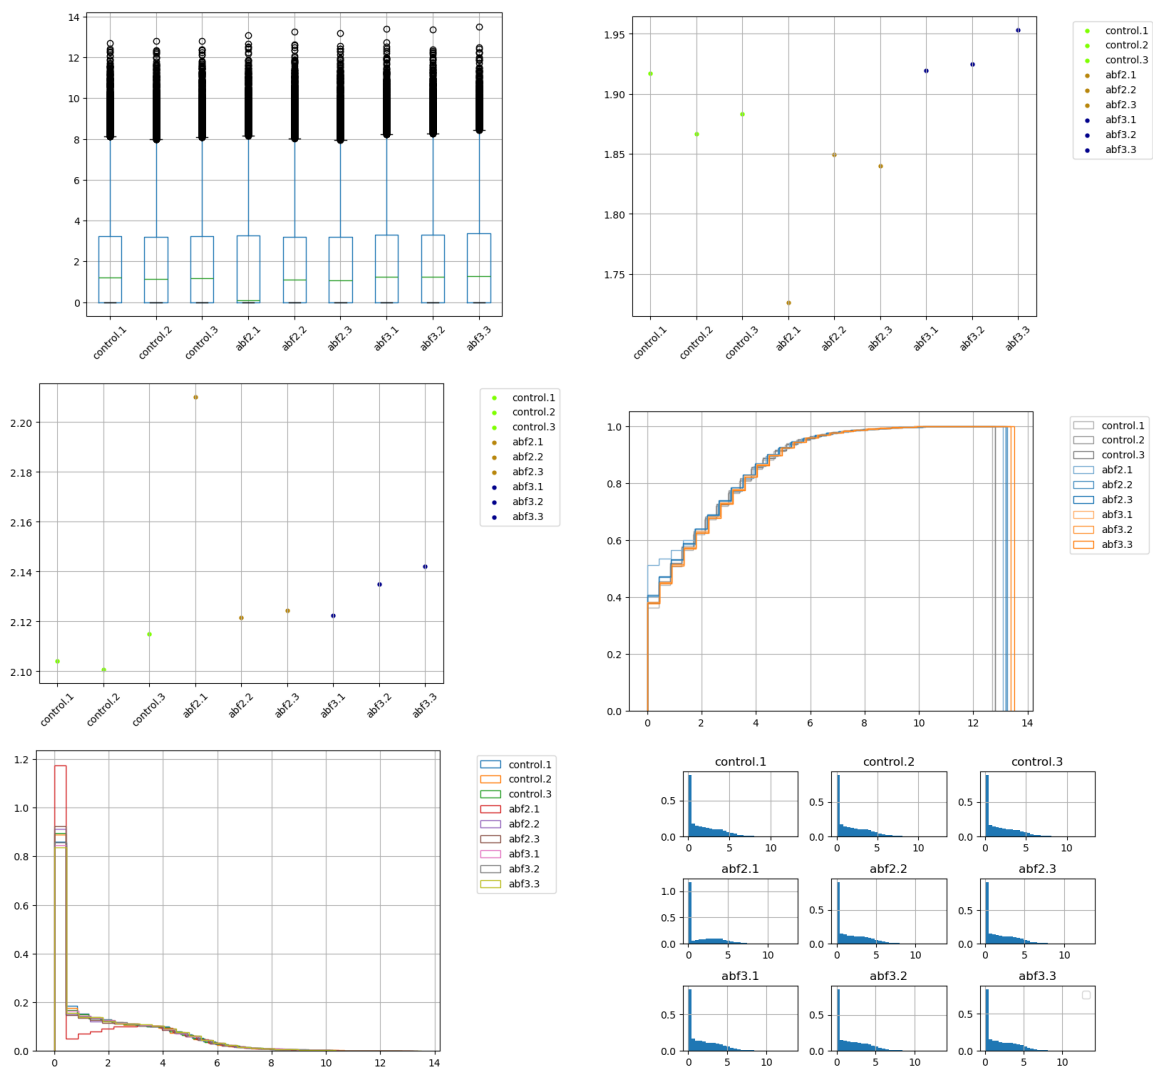

1 Summary

- // PCA:
 - Separates all groups clearly distinguishable
 - Especially ABF2 and ABF3 are clearly distinguishable
 - Supports different transcriptional programs between both TFs
- // Distributions:
 - Shows that abf2.1 is a potential outlier (just slightly)
 - Interestingly, this does not align with the higher duplicates in the fastqc of the raw reads
- // Correlations:
 - Also suggest that abf2.1. is slightly different then the rest of the group

2 PCA

3 Expression-Profile-Distributions

4 Gene-Expression-Correlation
